

**Table of Contents of the book “Inductance and Force Calculations in Electrical Circuits”,
M. d. A. Bueno and A. K. T. Assis (Nova Science Publishers, Huntington, New York, 2001),
135 pages, ISBN: 1-56072-917-1**

Acknowledgments

Introduction

I Inductance

1 Inductance Coefficients

1.1 Introduction

1.2 Current Element

1.3 Neumann's Inductance

1.3.1 Neumann's Energy Between Current Elements

1.3.2 Neumann's Expression

1.4 Weber's Inductance

1.4.1 Weber's Energy Between Point Charges

1.4.2 Weber's Energy Between Current Elements

1.4.3 Weber's Expression

1.5 Maxwell's Inductance

1.5.1 Darwin's Lagrangian

1.5.2 Maxwell's Energy Between Current Elements

1.5.3 Maxwell's Expression

1.6 Graneau's Inductance

1.6.1 Graneau's Energy Between Current Elements

1.6.2 Graneau's Inductance

1.7 Equivalence of the Mutual Inductances

2 Self-Inductance

2.1 Introduction

2.2 Method for Calculating Inductances

2.3 Comparison with Known Results

2.3.1 Solenoid with Poloidal Current

2.3.2 Cylinder with Axial Current

2.3.3 Coaxial Cable

3 Inductance in Several Geometries

3.1 Linear Element

3.1.1 Straight and Parallel Conductors

3.1.2 Straight and Orthogonal Conductors

3.2 Surface Element

3.2.1 Rectangular Surface

3.2.2 Rectangular Surfaces in Contact

3.2.3 Rectangular Circuit

3.3 Volumetric Element

3.3.1 Straight Conductor with a Rectangular Cross-Section

3.3.2 Rectangular Circuit

4 Complete Equivalence

4.1 Preliminary Results

4.2 Proof of Equivalence

II Force

5 Force Between Current Elements

5.1 Ampère's Force

5.1.1 Weber's Force

5.1.2 Ampère's Force Between Current Elements

5.2 Grassmann's Force

5.2.1 Liénard-Schwarzschild's Force

5.2.2 Grassmann's Force Between Current Elements

5.3 Partial Equivalence

5.4 Description of the Method

6 Force in Several Geometries

6.1 Linear Element

6.1.1 Parallel Wires

6.1.2 Orthogonal Wires

6.1.3 Rectangular Circuit

6.2 Surface Element

6.2.1 Rectangular Circuit I

6.2.2 Rectangular Circuit II

6.2.3 Rectangular Circuit III

6.2.4 Discussion

6.3 Volumetric Element

6.3.1 Rectangular Circuit

6.3.2 Discussion

6.4 Solenoid with Poloidal Current

7 Complete Equivalence

7.1 Bootstrap Effect

7.2 Proofs of Equivalence

8 Final Discussion

8.1 Comparison with Experimental Data

8.2 Relation Between Inductance and Force

8.3 Longitudinal Force

8.4 Open Questions and Future Perspectives

9 Conclusions

Appendices

A Approximation Method for Integrals

B Example of the Method

Bibliography

Index
