

Table of Contents of the book “Weber’s Planetary Model of the Atom”, A. K. T. Assis, K. H. Wiederkehr and G. Wolfschmidt (Tredition Science, Hamburg, 2011), 184 pages, ISBN: 9783842402416. Edited by G. Wolfschmidt.

Preface: Weber’s Planetary Model of the Atom (G. Wolfschmidt)

Einleitung: Wilhelm Webers Planetenmodell (K. H. Wiederkehr)

1 Weber’s Planetary Model of the Atom (A. K. T. Assis and K. H. Wiederkehr)

1.1 Introduction

1.2 Weber’s Atomism

1.3 The Nature of the Galvanic Current

1.3.1 The Electric Current According to Oersted

1.3.2 The Electric Current According to Ampère

1.3.3 The Electric Current According to Faraday

1.3.4 The Electric Current According to Maxwell

1.3.5 Weber’s Initial Conception of an Electric Current

1.4 The Nature of the Molecular Currents

1.4.1 The Molecular Currents According to Ampère

1.4.2 On the Origins of the Resistance of Conductors According to Weber

1.4.3 The Molecular Currents According to Weber

1.4.4 Further Developments of Weber’s Conception about Ampère’s Molecular Currents

1.5 The Evolution of Weber’s Conception of an Electric Current: From a Double Current to a Simple Current

1.6 The Motion of Two Charged Particles Interacting According to Weber’s Force Law

1.6.1 Weber’s Force and Potential Energy

1.6.2 Weber’s Introduction of an Inertial Mass for the Electric Fluids

1.6.3 Weber’s Equation of Motion and His Critical Distance

1.6.4 Motion of Two Particles of the Same Kind

1.6.5 Motion of Two Dissimilar Electrical Particles

1.7 Weber’s Speculations about the Conduction of Electricity and Heat in Conductors

1.8 Weber’s Speculations about the Conduction of Heat in Insulators

1.9 Optical Properties of Weber’s Planetary Model of the Atom

1.10 Weber’s Mature Planetary Model of the Atom and the Periodic System of the Elements

1.10.1 Deriving a Gravitational Force Law from Weber’s Electric Force Law

1.10.2 The Manifold of Ponderable Bodies

1.10.3 The Periodic Table of the Chemical Elements

1.10.4 Application to Chemical Bondings

1.10.5 Open Topics

1.11 Final Considerations

1.12 Acknowledgments

Bibliography

- 2 Vorstellungen von der elektrischen Leitung und Entwicklung der Elektronentheorie der Metalle von Riecke, Drude, Lorentz bis Sommerfeld (K. H. Wiederkehr und G. Wolfschmidt)
 - 2.1 Einleitung
 - 2.2 Michael Faraday (1791-1867) und André Marie Ampère (1775-1836)
 - 2.3 James Clerk Maxwell und die “Natur des elektrischen Stroms”
 - 2.4 Gustav Theodor Fechner (1801-1887) und Wilhelm Weber (1804-1891)
 - 2.5 Die klassische Elektronentheorie der Metalle
 - 2.6 Eduard Riecke (1845-1915)
 - 2.7 Paul Drude (1863-1906)
 - 2.8 Ludwig Lorenz (1829-1891), dänischer Physiker
 - 2.9 Hendrik Antoon Lorentz (1853-1928)
 - 2.10 Niels Bohr (1885-1962)
 - 2.11 Krise der klassischen Elektronentheorie der Metalle
 - 2.12 Stewart-Tolman-Versuch – Richard Chace Tolman (1881-1948) und Thomas Dale Stewart (1890-1958)
 - 2.13 Arnold Sommerfeld (1868-1951)
 - 2.14 Literatur

- 3 Works by Assis related to Weber’s Law Applied to Electromagnetism and Gravitation (A. K. T. Assis)
 - 3.1 Books
 - 3.2 Papers

- 4 Zeittafel zu Wilhelm Weber (1795-1878)

- 5 Arbeiten zu Gauss und Weber von K. H. Wiederkehr (K. H. Wiederkehr)
